About the Company

FILC emerged in 2001, with the main mission of guaranteeing the provision of solutions for the textile sector, given the need in the market to fill a gap with regard to industrial machines in this sector.

Being constantly challenged in creating solutions for the market and, consequently, for customers is what most motivates the CEO of FILC, who already operates in countries such as Brazil, Tunisia, Morocco, Egypt, Jordan, Bangladesh, India, Italy, Germany and Spain.

Currently, FILC is present in the textile, footwear and automobile industries, the latter, more specifically, in the area of upholstery. Filipe Coutinho's main objectives are to be a reference in the sector, reaching more and more markets and having the total satisfaction of its customers as its primary focus.

We are a company dedicated to the research, development and implementation of solutions for the industry, with the aim of providing modern, practical and easy-to-use solutions. Our team also offers personalized assistance to clarify doubts and ensure that the purchase meets the customer's needs.

Who we are?

We are a Portuguese group, with more than 30 years of experience dedicated to the commercialization and development of new solutions for the clothing industry. In recent years, we have also invested in a strong consultancy and training component, with clients and development centers around the world.

Solutions

Customization tailored to each client

With many years of experience in the textile industry around the world, we provide complete solutions, covering the entire business cycle of the textile process.

Sewing

We sell and develop all types of sewing solutions. We have a team of specialists qualified to develop our own solutions, tailored to the customer.

Cutting room

We offer the widest and most modern range of solutions for the cutting room. Various models of roll loading and handling systems, automatic spreading machines, tables, labellers, automatic cutting machines with different placement thicknesses (from 2.5cm to 9cm) and plotters.

Bonding

We sell hot glue machines for clothing and accessories. An innovative procedure that, compared to traditional adhesive sewing, makes the garment more comfortable, clean and impermeable. Hot gluing standby parts are especially suitable for sports activities.

Finishing

We sell professional ironing machines for the clothing and fashion industry. Each machine is customized according to the customer's needs.

“

We do not limit ourselves to delivering the machines, quite the contrary. In the vast majority of cases, we customize the machines and technological services in detail to the exact extent of needs through our advisory, technical assistance and innovation services.

(Filipe Coutinho in Jornal T)

Services

We offer a set of personalized services, aimed at the specific needs of each client, which guarantee and comply with the required standards of quality and excellence.

The greatest efficiency, a specialized technical team, guarantee of our machines and the best solutions for the textile industry.

At FILC® we are distinguished by the customization of our products and the total satisfaction of our customers.

Advice

Produce with maximum efficiency, in any segment! Consult our specialists and find out about the best solutions to equip them in the most appropriate way.

Warranty

We ensure the guarantee of the machines we sell, with a team of specialized technicians, in order to meet all the needs and requirements of each client.

Technical assistance

Our technical team is formed by specialized and certified professionals, to assist all customers, offering customized solutions to improve the maximum efficiency and potential of the machines.

Parts and Accessories

So that the machines do not stop, or start producing again, we have a department of accessories and original parts, in addition to hundreds of other items for the best known brands of machines in the market.

We want to keep national customers satisfied and continue to evolve here, but we know that it is also necessary to grow abroad and expand our services across borders.

(Filipe Coutinho in Jornal T)

High Performance Software

Software designed for the present and the future. The widest range of seamlessly integrated and highly customizable software packages for optimizing production, managing each machine's functionality, assisted design of garments and automatic placement of cut markers. All of our software has been designed to keep pace with the times and the industry. Deployable and flexible, they are highly prepared to receive new entries or additions.

Visual Nest: The most practical and effective system to visualize the markers directly on the fabric.

CAD: A modern, complete and easy-to-use work system that accompanies the company from A to Z.

COP: Morgan Cut Order Planning is the direct descendant of the first work order planning system for the cutting room.

3DRESS: The virtual design and assembly software that makes clothing design extraordinarily advanced and creative.

Consulting

FILClean
 CONSULTORIA

FILC®, through its FILC® Lean service, helps companies achieve operational excellence, eliminating waste, streamlining flow, improving performance and, consequently, the quality of products and services.

This is a personalized consultancy service to improve productivity and efficiency within a defined period, involving a precise diagnosis, team training by experts and a well-structured execution plan divided into 3 fundamental points:

Diagnosis and strategy: establishment of more efficient transformation strategies, based on the diagnosis of the current situation, identification of potential for improvement and definition of a future vision of the processes.

Implementation: transformation of processes, according to the strategy defined in the diagnosis, in which the internal teams are guided and accompanied by a consultant.

Sustainability: follow-up activity and coaching, with a view to progressively increasing the autonomy of the teams and implementing a culture of continuous improvement.

Partners

The lasting relationship we have with the brands we represent translates into successful partnerships, which result in the enhancement of technological innovation and specialized knowledge that translate into the daily response to the needs and demands of our customers.
